

Distributor Product Line Guide

North Coast Bearings markets and distributes a wide range of products for heavy, medium and light duty vehicles under the DT Components and Coast to Coast brands.

DT Components is a product line that was created in 1997 through a strategic alliance with The Timken Company that is focused on premium differential, transmission and driveline products.

The Coast to Coast product line is focused on providing distributors with a quality competitive alternative to the premium products.

Offering both of these lines, North Coast Bearings is able to provide distributors with the appropriate product to meet their customer's specific needs.

North Coast Bearings services our customers from our 220,000 square foot Avon, Ohio facilities along with a distribution center in Sparks, Nevada. The DT Components brand of kits are also available from additional Timken distribution centers throughout the world.
